

ComposTumbler Sifter Screen

ASSEMBLY INSTRUCTIONS

It is necessary to install two hooks onto the screen to latch it in place over the doorway.

To do this you will require a screwdriver and a wrench.

1. Rotate the drum so that the latches are at the top of the opening. You will now be working on the backside of the unit to complete the installation.
2. Position the screen on the latch hooks as shown in the photo and close the latches.
3. Follow the diamond pattern straight down from the latches and assemble a hook to the inside of the screen with the hooked end oriented so that it will engage the hook already on the unit. Use two bolts, large washers, lockwashers and nuts to attach the hook until finger tight. The upper bolt should be in either the second or third opening from the edge of the screen and the hook positioned over the one on the drum. Do the same for the second hook.
4. After both hooks on the sifter screen are positioned properly, open the latches so you can adjust the hooks to get the right tension before tightening the hardware.

Now the screen is ready to install on your ComposTumbler for sifting your finished compost.
