The clever way to compost, with Mantis.

Gardening is a very personal, individual activity. There are numerous books and manuals available on different composting techniques. Now there is a way to ensure the process is easily achieved in any garden.

The incredible Mantis ComposTumbler is the cleanest, easiest way to make the best possible compost, in the shortest possible time.

Our specially-engineered design helps you make your own safe, natural, nutrient-rich fertilizer from organic yard and kitchen scraps you would normally throw away, and it can take as little as 14 days.

With the ComposTumbler your organic material heats up more quickly for faster decomposition. Daily tumbling turns the mixture to evenly distribute the moisture, build up a heat core and expose the mix to essential oxygen.

Plus, the drum is self-contained, meaning all those nutrients stay in your compost where they should be, and don't leach into the ground like they do with messy compost piles or floor-standing compost bins.

Not only will your compost be easier and faster to make, it will actually be superior to composts that take months to produce using other methods.

Leaving time for the important things.

We want to help gardeners do what they're good at, by saving them time and energy to allow them to concentrate on the enjoyable aspects of the garden.

With the new Mantis ComposTumbler, you can make a virtually endless supply of nutrient-rich, sweet-smelling compost, simply, economically, and in record time.

Each batch of compost can take as little as 14 days to produce with most materials, instead of the months or even years required by most traditional methods.

Back Porch ComposTumbler

Back Porch ComposTumbler

Original ComposTumbler

A revolution in gardening, literally.

With the ComposTumbler you don't need a fork to turn your compost. There's a simple handle to make rotating the drum incredibly easy, which makes the process much quicker. The quicker the compost breaks down, the less time there is for valuable nutrients to dissipate or important elements to waste away.

The handle is well positioned so you can reach it without straining, good news for any gardeners prone to backache. There is no strenuous lifting needed or awkward movements necessary to achieve great compost.

Original ComposTumbler

It couldn't be easier.

1 Fill It

Open your ComposTumbler door and throw in all your pulled weeds, grass clippings, kitchen waste, overripe crops, dead flowers and any other organic material. Close the door and make yourself a cup of tea.

2 Turn It

Within hours the magic begins. Millions of oxygen consuming bacteria go to work. The greatest activity occurs in the inner core, so the secret of 14 day compost is to change this core daily. Give the handle on your ComposTumbler five turns - just once each day. This mixes and aerates your organic material to build up a heat core (of up to 160 degrees) to speed up decomposition and kill off any weed seeds.

3 Use It

After as little as 14 days, your rich compost should be ready to use to help you build your soil and boost the health and productivity of all your plants, from your favorite flowers and tasty tomatoes, to the fern in your living room. In a traditional compost pile, it would have taken six months to a year to reach this stage. Note: The time the process takes is dependent on the climate and materials composted.

The Back Porch ComposTumbler

A household size composter for daily amounts of household scraps, and it's portable too. The small size is ideal for your deck, outside your kitchen door or next to your recycling bin.

The Back Porch ComposTumbler is easy to move around, making it ideal for gardeners who need to transport and unload the compost in multiple areas in the garden, or those households in built up areas where outside space is more limited.

The new insulated design lets you compost in cooler weather and it's light weight makes it easy to rotate. You can add scraps daily for continuous composting, and the smaller model is great for Winter composting, taking around 4-6 weeks to produce great compost.

Plus, the high density polyethylene drum is only 25" in diameter, yet it still holds up to 140 litres of compost.

The Original ComposTumbler

Our Original ComposTumbler design and still the most versatile, according to our customers. This is the ideal model for the larger garden, or if you need to unload into a wheelbarrow.

Our Original model is the perfect choice if you're planning to compost grass clippings all summer long. It's the right size for you if your property is home to large trees that drop lots of leaves each Autumn, if you have a sizable vegetable patch or allotment, or if you have annuals that can be composted at the end of the season.

The large 635 litre capacity helps you make enough compost for all of your trees, shrubs, and any garden or indoor potted plants.

The drum sits 27" off the ground for easy unloading right into a wheelbarrow, and the gear-driven drum means easy, non-slip rotating, even when full.

The Compact ComposTumbler

If you're looking for a fast, convenient way to compost your kitchen scraps, grass clippings, and organic garden waste, our Compact ComposTumbler is just right for you.

Whether you're a weekend weed puller, or an experienced green thumb who practically lives in the garden, the Compact ComposTumbler is bound to be a well-suited compromise between small and large models. The Compact ComposTumbler turns waste material into nutrient-rich compost in as few as 14 days. With the same design features as our larger models, but at half the size.

With a handy 335 litre capacity it lets you make just the right amount of compost for your smaller property, and the drum sits 12" off the ground so the handle is at the perfect position for easy turning. The gear mechanism is molded into the drum cap and positioned for effortless turning without slipping.

The ComposT-Twin

The ultimate in multi-task gardening. While one drum is composting you are free to add your waste to the other drum, ensuring your garden has a steady supply of wonderfully fertile compost.

The ComposT-Twin is an ingenious solution for the high-maintenance garden. When timed correctly, you will be able to leave the first drum to compost while gradually adding your kitchen and garden waste to the awaiting second drum.

By the time your second drum is full, it will be time to empty the first drum into a wheelbarrow, and begin the cycle all over again. This means you can practically have compost on tap, to feed your larger garden with a constant supply of nutrients.

Each drum holds up to 350 litres of waste, and is high enough off the ground to empty into a wheelbarrow.

Optional Sifter Screen shown

The ComposTumbler **Thermometer**

Monitoring the temperature of your materials will tell you a lot about how your compost is progressing. Decay organisms feed on the organic material and cause the temperature to rise.

Worth £17
and free with
ComposTumblers

The Compost Thermometer may be the most important tool in helping you complete your compost in 14 days, as the temperature of the composting materials will tell you if everything is working properly.

If it isn't, you will be able to make adjustments in the first few days. As you tumble the materials, it introduces new food and air into the the core of the load.

A temperature of 65-70°C over a two to three day period will kill the majority of weed seeds. After several days, the microorganisms have devoured most of the food and the temperature will slowly and steadily begin to fall.

Thermometer today.

The ComposTumbler **Moisture Meter**

As well as monitoring the temperature of your load, you can now optimise the moisture of your compost and prevent overwatering of any potted plants, with the Mantis Moisture Meter.

Great for
preventing
overwatering

This Moisture Meter is another handy gadget to help you keep track of the optimal composting and planting conditions. It has a 20cm/8" long probe, allowing you to measure the moisture close to the roots of plants or in the core of the ComposTumbler, and not just superficially. The meter will indicate moisture content on a scale of 1 to 10.

With the Moisture Meter, you can prevent overwatering, which may be particularly hazardous to potted plants, and should ensure that your compost does not merely rot, but actually starts 'cooking'. No batteries required.

Moisture Meter today.

The ComposTumbler Sifter Screen

If producing your own superior compost isn't enough, you can also ensure it's finely sifted as you unload it from the drum. The Sifter Screen fits neatly in the doorway of your ComposTumbler.

Your compost is ready to use when when its internal core temperature has fallen down to match the outside temperature during the cool part of the day.

When your compost is finished you can use the sifter screen in place of the door, so that as you tumble the materials the smaller pieces fall through first.

To unload the processed compost from your ComposTumbler through your sifter screen, simply fit the screen in the place following the assembly instructions, place a wheelbarrow or large container under the drum, remove the door and rotate the drum until the dark, rich, compost pours out, ready for use wherever you need it.

Sifter Screen today.

The ComposTumbler Vinyl Cover

The ComposTumbler Vinyl Cover will protect your beloved ComposTumbler from the elements during the colder months, when you may not need as much compost in your garden.

After investing in such a well-engineered outdoor product, you'll want to protect it from the elements, and the weather in Britain can be particularly cruel to metal components and moving parts.

To provide adequate shielding from the wind and rain, Mantis have developed the ComposTumbler Vinyl Cover to fit the Compact and Original ComposTumblers.

When your ComposTumbler is not in use you can cover it, just like you would cover a barbeque in Winter. When you need to access the ComposTumbler just pull off the cover and fold it neatly, or even use it to protect your grass by laying it on the ground when unloading.

Vinyl Cover today.

The Mantis Loadumper

A huge improvement on the traditional wheelbarrow design. Simply push down on the handles, and the front of the Loadumper lifts up for easy unloading.

The Loadumper has a unique hinged mechanism that lets you tip the entire frame, or just the tub, and its two wheel design keeps it stable when unloading its impressive 70 litre / 180kg capacity.

It also features a powder-coated steel frame, foam-filled puncture proof tyres and a smooth tub for easy cleaning.

The Loadumper is the perfect companion for transporting soil, compost, cuttings, and heavy pots around your garden.

Only
£137.50

The Mantis promise

If you don't love it, return it to us within 60 days for a full no-hassle refund.

If any part of your ComposTumbler fails we'll repair or replace it.

We've now been helping gardeners in the UK for an impressive 25 years.

What our customers have to say.

"I am the proud owner of a ComposTumbler which I purchased last year. It does a great job, and gives me more time to work."

John P

"The ComposTumbler is the easiest thing in the world to handle, and I am not dependent upon my husband to mix a heavy pile of compost."

Sue L

"I get beautiful compost in eleven days using nothing but fresh grass clippings and sawdust. You should see our cauliflower!"
